OPERATION

The AQW series design allows customization for a sensor that meets project requirements for monitoring temperature, CO2 and relative humidity. The product can be ordered as stand alone temperature, CO2/Temperature, RH/Temperature or all-in-one CO2/RH/Temperature with a 0-5/10V analog or BACnet RS485 output. This installation manual applies to the Analog Version AQW sensor with 0-5/10V output.

To verify the features see the 'Product Identification' section of the installation manual. All versions come with temperature as a standard output. For CO2 and RH sensing, the option must be added at the factory.

QUICK START MENU

1. Press and hold ▼ and ◆ (the left and center buttons) for 1 second to enter the Quick Start Menu that is adjustable using the LCD. Screen will display $5PE$ when the menu has been activated.

2. Navigation and parameters:
   - Pressing ◆ advances to the next menu item.
   - If a menu item is visible, pressing either ▼ or ▲ displays the current value.
   - If a value is visible, pressing either ▼ or ▲ changes the value. Holding ▼ or ▲ for a time accelerates the value change.
   - If a value is visible, pressing ▼ and ▲ together sets the value to the default.
   - If a value is visible, pressing ◆ returns to the menu item list.

   $5PE$ Sets the relay turn-on threshold (Closed above this level); Default: 800
   $5Ph$ Sets the relay turn-off hysteresis (Open below this level); Default: 100
   $5CL$ Sets the CO2 concentration scaling (2 = 2000ppm (default); 5 = 5000ppm)
   RdJ Sets the CO2 concentration calibration offset up to +/-250ppm; Default: 0ppm
   CRL Sets the CO2 auto calibration period
            $0FF$ Auto calibration disabled, $7d$ 7 days, $14d$ 14 days (default), $30d$ 30 days, $60d$ 60 days
   $°FC$ Selects the unit system for displayed temperature measurements
            $U5n$ User defined (default), $°F$ Degrees Fahrenheit, $°C$ Degrees Celsius
   LuL Output Scaling: $5u$ 5.0V full scale, $10u$ 10.0V full scale (default)
   run Close this menu with changes saved and display parameters.

3. When setup is complete, select RUN or wait for setup mode to time out.

MENU OPTIONS

To access the full menu options use the 'AQ Series User's Guide' manual online at www.senvainc.com/download_center.asp

The 'AQ Series User's Guide' includes:
- User's Menu
- Setup Menu
- Quick Start Menu

HOME SCREEN

By default, the device displays one measurement at a time, rotating between measurements every 10 seconds if multiple sensor options are installed.

If the installer wants to change which values are displayed on the LCD, access the *User's Menu* (See 'AQ Series User's Guide').

VISUAL INDICATORS

Each measurement should display in turn.

If a measurement does not appear, the respective sensor damaged, has been removed from the device, or has been selected not to appear through the *User's Menu* (See 'AQ Series User's Guide').

TROUBLESHOOTING

| Symptom	Solution
No output	Check wiring. Ensure power supply meets requirements.
Reading error	Verify unit is located away from hot/cold sources.
	Verify control panel software is configured correctly.
	Verify accuracy of test instrument.
	Install insulation behind sensor to prevent air flow from inside wall.
