## Senva CT Selection Guide

| Application | Product Family | Split Core 23XX | Mini Split 22XX | Solid Core 13XX | Mini Solid 12XX | Analog Rogowski | Operation | Advantages |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Proof of flow： <br> Constant volume fans and pumps | PreSeズ <br> Adjustable dial set to motor FLA | $\begin{gathered} \mathrm{C}-2320 \\ \text { Series } \\ 0.45-50 \mathrm{~A} \end{gathered}$ | $\begin{gathered} \text { C-2220 } \\ \text { Series } \\ 1.0-50 \mathrm{~A} \end{gathered}$ | $\begin{gathered} \text { C-1320 } \\ \text { Series } \\ 0.75 \mathrm{~A}-50 \mathrm{~A} \end{gathered}$ | $\begin{gathered} \mathrm{C}-1220 \\ \text { Series } \\ 0.75 \mathrm{~A}-50 \mathrm{~A} \end{gathered}$ | － | Set dial to motor FLA． Alarms when motor amperage falls due to loss of belt，coupling，or media | Preset dial eliminates calibration in live enclosures |
| Proof of flow：VFDs and constant volume fans and pumps | Autoser＂ <br> VFD／CV Self－ calibrating | $\begin{gathered} \text { C-2350VFD } \\ \text { Series } \\ 0.5-135 \mathrm{~A} \end{gathered}$ | － | － | － | － | Automatically detects expected current and alarms when amperage falls below expected level at frequencies above 40 hz | Self－calibration <br> elminates all calibration on wide range of applications |
| Go／No Status：ECMs <br> Electrically commutated motors | ECMSef <br> Precision adjustment for low amp motors | $\begin{gathered} \text { C-2320L } \\ \text { ECM Series } \\ 0.25-5 A \end{gathered}$ | － | － | － | － | ECMs have standy by current draw when not running．Set dial to minimum current to prevent false ON indications | Fewer call backs． <br> Preset allows multiple motors to be configured once set point is determined |
| Go／No Status： <br> General Application | Fixed Setpoint | $\begin{gathered} \mathrm{C}-2300 \\ \text { Series } \\ 0.35-200 \mathrm{~A} \end{gathered}$ | $\begin{gathered} \text { C-2200 } \\ \text { Series } \\ 0.5-200 \mathrm{~A} \end{gathered}$ | $\begin{gathered} \text { C-1300 } \\ \text { Series } \\ 0.25-50 \mathrm{~A} \end{gathered}$ | $\begin{gathered} \mathrm{C}-1200 \\ \text { Series } \\ 0.25-50 \mathrm{~A} \end{gathered}$ | － | Alarms at a fixed，low level when current is present | Low cost，ideal for unit vent heaters and fixed loads where no belts or coupling loss possible |
| Monitoring／Load Trending and Profiling： <br> Analog current sensors | Analog Split and Solid Core or Rogowski rope style | $\begin{gathered} \text { C-234X } \\ \text { Series } \\ 5-200 \mathrm{~A} \end{gathered}$ | － | $\begin{gathered} \text { C-130X } \\ \text { Series } \\ 1-15 A \end{gathered}$ | $\begin{gathered} \text { C-120X } \\ \text { Series } \\ 1-15 A \end{gathered}$ | $\begin{aligned} & \text { C-3XXX } \\ & \text { Series } \\ & 0-6000 \mathrm{~A} \end{aligned}$ | $0-5$ VDC or $4-20 \mathrm{~mA}$ output proportional to current | Ideal for load trending |

7 year limited warranty
